

Eco-friendly Designs

While environmentally responsible practices have gained widespread popularity in the past few years, James and Hae-Sun Robyn, owners of Rin Robyn Pools have been promoting green living for decades by building pools with energy-saving technology. The Robyns began building pools with solar heating systems back in 1979, and today they design various types of eco-friendly pools—from energy-efficient traditional pools to chemical-free, natural swimming pools (NSPs). NSPs are filtered by a pond-like “regeneration zone” full of plants and beneficial bacteria, which eliminates the need for any chemicals, including chlorine.

Many current homeowners are in search of socially responsible alternatives, and the Robyns are proud to be among the leaders who are setting the standards for eco-friendly, high-end pools that have a great deal of design versatility.

Rin Robyn Pools has been family-owned and operated for over 50 years, and the Robyns, along with their team of professionals, personally oversee every project from concept to completion. By discussing ideas with clients and incorporating green technology into each of their designs, the Robyns create stunning poolscapes that are also low-maintenance. Rin Robyn Pools employs comprehensive planning and attention to detail on its renovation projects as well.

In addition to building custom concrete pools, spas, and water features, Rin Robyn often incorporates outdoor kitchens, fireplaces, gazebos, and pool houses. The final results are luxurious backyard retreats where families and friends can enjoy their time together in a beautiful environment. “With every client, we design an outdoor space that enhances these moments and memories,” says James Robyn.

A Genesis 3 Design Group gold member, Rin Robyn Pools has received numerous national design awards. Its pools have been featured in national and regional magazines, as well as on popular television programs. The company is also the founding authorized dealer partner with BioNova® Natural Pools, an international network of dealers certified in building natural swimming pools. ❖

Rin Robyn Pools
Bernardsville, NJ 07924 908-879-9411 www.rinrobyn.com
In Business for 51 Years
Builds 5 - 10 Pools per Year
Service Area Designs: Internationally Builds: Northeast and Mid-Atlantic

With boulders embedded in the beach entry and plants that live in the pool water, you have nature at its best. Cattails, pickerel weed, water lilies, and American lotus grow in the regeneration zones next to the wooden deck and the far side of the pool. Energy-efficient ozone and ultraviolet light devices are also used to treat the water.

This pool by BioNova Natural Pools features fully biological filtration with local marsh plants growing in the regeneration zone. Except for a small pump, no chemicals or other devices are used at all. Rocks and small boulders enhance this natural setting.

This energy-efficient pool and year-around spa use high-performance pumps and filters. Stacked stone surrounds the spa and outdoor fireplace, which creates a soothing ambience for a warm soak during an East Coast winter.
